Application No.

Continuation of 5. does NOT place the application in condition for allowance because: the new matter still exists. Applicant's arguments are not commensurate in scope with the claim language. Applicant argues that the chrome oxide is not completely removed, and that only the chrome oxide layer is etched while the quartz is etched, and that the chrome is not etched. However, the claims do not cite this.

Claim 1 cites that there is an "etch relation between the substrate and the reflective material" which inherently describes some kind of etching relation between the two materials with etching of the reflective material. The etching relation has not been defined otherwise, and reasonably interpreted includes etching of the reflective material. The claim has defined the reflective material as having been etched, but the new matter cites that the reflective material is not etched. Similar arguments apply for the other independent claims.
